

PRIYAM RAI

+91-8299307452 | priyamrai282@gmail.com | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

Professional Summary

Computer Science undergraduate specializing in Artificial Intelligence and Machine Learning, with practical experience in full-stack web development and hands-on machine learning projects. Proficient in Python, Java, C++, React.js, SQL, RESTful APIs, and the MERN stack. Passionate about building scalable software solutions and AI-powered applications to solve real-world challenges.

Education

B.Tech in Computer Science Engineering	2023 – 2027
Vellore Institute of Technology, Bhopal,	CGPA: 8.63/10
Senior Secondary (12th)	2022
Prasad International School, Jaunpur	Percentage: 69%
Secondary School (10th)	2020
Prasad International School, Jaunpur	Percentage: 72.6%

Technical Skills

Programming Languages: Python, Java, C++, JavaScript, SQL

Web Technologies: React.js, HTML5, CSS3, Bootstrap, Node.js, Express.js

Machine Learning: Scikit-learn, Pandas, NumPy, Data Preprocessing, Feature Engineering, Model Evaluation, Hyperparameter Optimization

Databases: MongoDB, SQL, Database Management Systems (DBMS)

Core Subjects: Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Computer Networks, Software Engineering

Developer Tools: Git, GitHub, VS Code, Jupyter Notebook, Postman, MATLAB, Vite

Cloud: AWS Fundamentals

Projects

MediAura – AI Medical Chatbot 2026

Tech Stack: MERN Stack, LangChain, LLM [GitHub](#) — [Live Demo](#)

- Engineered an AI-powered healthcare chatbot using the MERN stack, LangChain, and large language models to deliver contextual medical assistance and symptom-based guidance.
- Integrated JWT authentication, role-based authorization, and MongoDB to ensure secure user management, persistent conversations, and reliable data storage.
- Designed more than ten RESTful API endpoints supporting authentication, medical consultations, chat history management, and profile operations with a modular back-end architecture.
- Optimized front-end responsiveness with React, enabling seamless interaction, efficient state management, and an intuitive user experience across devices.

Diabetes Prediction System 2025

Tech Stack: Python, Streamlit, Scikit-learn, Pandas [GitHub](#) — [Live Demo](#)

- Developed a machine learning-based diabetes prediction system using Scikit-learn, achieving 75.32% classification accuracy on the PIMA Indians Diabetes Dataset.
- Performed data preprocessing, feature scaling, train-test splitting, and feature engineering to improve model performance and reliability.
- Built and deployed an interactive Streamlit web application that allows users to enter health parameters and receive instant diabetes risk predictions.
- Evaluated multiple machine learning algorithms using accuracy and classification metrics to identify the most suitable predictive model.

Achievements

- Solved 200+ DSA problems on LeetCode using C++ and Java.
- Developed AI-powered and full-stack applications using the MERN stack and machine learning.
- Built secure RESTful APIs with JWT authentication and MongoDB integration.
- Completed certifications in Machine Learning, Cloud Computing, IoT, and MATLAB.

Certifications

- Applied Machine Learning in Python – University of Michigan
- Machine Learning with Python – IBM
- NPTEL Cloud Computing – IIT Kharagpur
- NPTEL Internet of Things (IoT) – IIT Kharagpur
- MATLAB Onramp – MathWorks
